

Website Review: involvi.ca

User experience, speed and search (SEO) review with a prioritized action plan

Prepared for

Ashley McKarney
Involvi HR Consulting

Prepared by

Mike Alexander

Date

September 24, 2026

EXECUTIVE SUMMARY

A solid, professional site that is slow on phones and hard to measure

involvi.ca looks credible, features your real team rather than stock photos, and leads with a clear free offer: the HR Health Check. It is also secure and fully patched on 40Two hosting. The gaps sit in three places, and most of the fixes are small.

1. MOBILE SPEED

Mobile speed scores are **44 to 57 out of 100**. The homepage headline fades in, and on a phone the main content takes several seconds to appear. Desktop is fine (80 to 85).

2. SEARCH HOUSEKEEPING

Google can see test pages and "lorem ipsum" links. Only the homepage has a main heading (H1), none of the 24 blog posts have search descriptions, and the blog stopped in **December 2023**.

3. LEADS AND TRACKING

No analytics is installed, so leads cannot be measured. The Health Check sends visitors off-site to Microsoft Forms, and the contact form caps messages at **180 characters**.

Scorecard

LOOK AND BRAND

✓ Good

Clean layout, real team photos, consistent colours.

DESKTOP SPEED

✓ Good

80 to 85 of 100. Main content in 1 to 2.2 s.

MOBILE SPEED

⚠ Needs work

44 to 57 of 100. Main content in 6.8 s or more.

SECURITY AND HOSTING

✓ Strong

Up to date, 0 known vulnerabilities.

SEO FOUNDATIONS

● Fair

Sitemap, HTTPS and titles in place; headings, alt text and schema missing.

CONTENT FRESHNESS

⚠ Needs work

Last blog post Dec 2023; some outdated or broken copy.

CONVERSION PATH

● Fair

Clear free offer, but off-site forms and generic CTAs.

ACCESSIBILITY

● Fair

88 to 91 of 100. Contrast and link labels to fix.

What is working

- Real photography of Ashley and the team builds trust fast.
- A clear, free first step (HR Health Check) repeated across the site.
- Yoast SEO, an XML sitemap, HTTPS, canonical tags and social sharing tags are all set up.
- WordPress and every plugin are current, with no known vulnerabilities.

Recommended first step

Two weeks of quick wins (Priority 1 in the action plan): install analytics, publish a privacy policy, clean test content out of Google, fix the contact form and the content errors, and make the headline and phone number work harder.

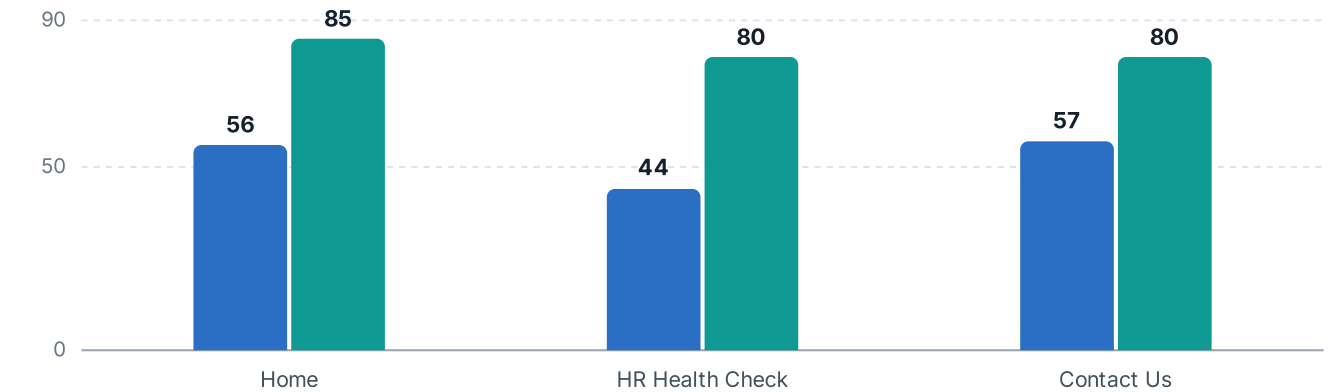

Then a **speed and SEO pass** (Priority 2) before any redesign, so the refresh is built on measured results.

SPEED TEST

Fast on desktop, slow on phones

We tested three key pages with Google PageSpeed Insights. It simulates a mid-range phone on a 4G connection and a desktop on broadband. Google has no real-visitor speed data for involvi.ca yet (traffic is below its reporting threshold), so this lab test is the best guide. Scores move a few points between runs.

■ Mobile ■ Desktop Performance score out of 100. Google rates 90+ good, 50 to 89 needs improvement.

PAGE	DEVICE	FIRST CONTENT	MAIN CONTENT (LCP)	FROZEN TIME (TBT)	LAYOUT SHIFT	PAGE WEIGHT
Home	Mobile	10.4 s	17.1 s	0 ms	0	3.1 MB
Home	Desktop	0.8 s	2.2 s	140 ms	0.03	3.4 MB
HR Health Check	Mobile	5.9 s	6.8 s	680 ms	0	2.8 MB
HR Health Check	Desktop	1.2 s	1.4 s	310 ms	0	
Contact Us	Mobile	4.8 s	6.8 s	250 ms	0	
Contact Us	Desktop	0.9 s	1.0 s	330 ms	0	

How to read this: "First content" is when anything appears. "Main content" (Largest Contentful Paint) is when the biggest element, here your headline, appears; Google's target is 2.5 seconds or less. "Frozen time" (Total Blocking Time) is how long the page ignores taps while loading; under 200 ms is good. Test date: September 24, 2026.

SPEED TEST

Why phones are slow

The server itself is fast: it answers in a few milliseconds through Cloudflare. The delay comes from what the browser has to download and process before it can draw the page.

Too many files block the first paint

The homepage loads 38 stylesheets and 26 scripts. Google estimates about **5 seconds** could be saved on mobile by deferring or combining them.

Unused code

261 KB (home) to 681 KB (HR Health Check) of JavaScript is downloaded but never used. Two add-on packs (ElementsKit and Essential Addons) run on top of Elementor Pro, plus the Envato Elements design library.

Every font weight is loaded

Roboto Slab and Open Sans are requested in all nine weights plus italics, from Google's servers. The design uses a handful.

The headline fades in

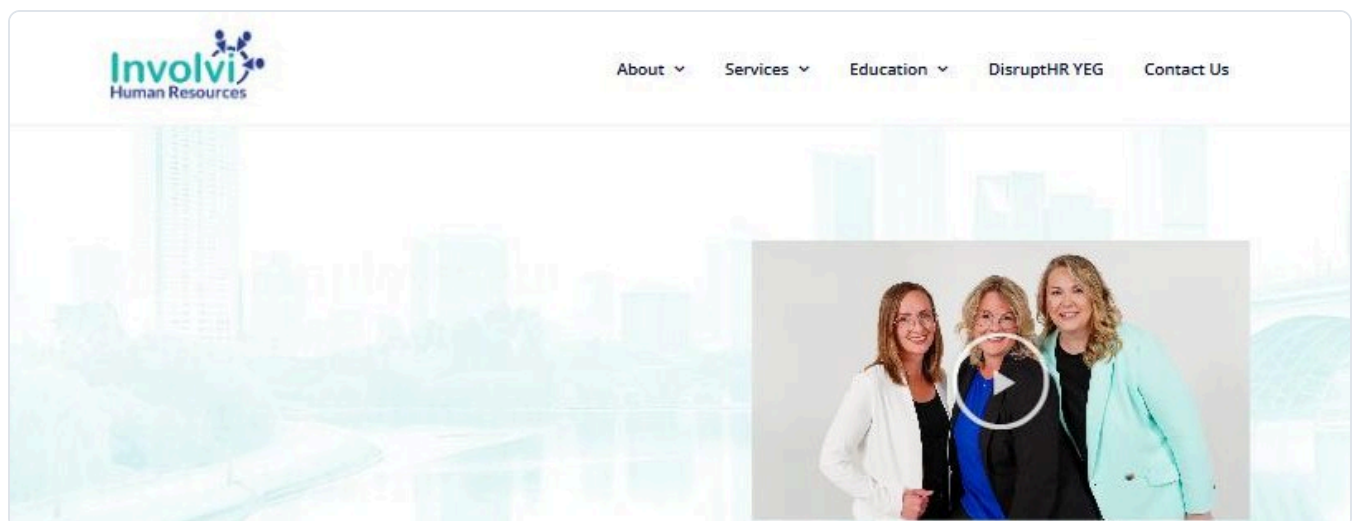

Your homepage headline is the page's "main content", and it starts invisible and animates in. On mobile that adds about **3.6 seconds** before visitors can read it.

Images and embeds

Several photos are full-size JPGs rather than modern WebP files (up to 470 KB to save). A Google Map loads at the bottom of almost every page, and YouTube players load before anyone presses play. These also set third-party cookies, which lowers the Best Practices score to 77.

Two spam filters

Cloudflare Turnstile loads even on the homepage, which has no form, and the contact form also loads Google reCAPTCHA. One is enough, and only on pages with forms.

The homepage on desktop a moment after loading. The headline and the "Are you curious..." heading have not appeared yet; they fade in a few seconds later.

Target after the speed pass: mobile score 80+, main content under 2.5 seconds on a phone, page weight under 1.5 MB. None of this requires a redesign.

SEO REVIEW

Good foundations, weak housekeeping

We crawled all 38 pages and posts in your sitemap. The technical basics are in place (Yoast SEO, sitemap, HTTPS, canonical tags, social previews, SEO scores of 92 to 100). What holds the site back is content hygiene and missing signals that help Google, and AI answer engines, understand who you are and where you work.

Test content is visible to Google

⚠ High

"Sample Page" (WordPress's default page with the "Gotham City" text) and "Elementor #6" are live, indexable and listed in the sitemap. Three blog posts use placeholder "lorem ipsum" web addresses, for example */pharetra-et-ultrices-neque/* for "3 SMB Questions for Determining Increased Employee Turnover".

Fix: remove the two test pages; give the three posts proper addresses with permanent (301) redirects.

Pages have no main heading

⚠ High

Only the homepage has an H1, the heading that tells Google what a page is about. Every other page title (for example "HR Health Check") is coded as a smaller H2, and all 24 blog posts are missing an H1.

Fix: one H1 per page and post. A settings change in the page templates.

Missing search descriptions

● Medium

All 24 blog posts have no meta description, so Google writes its own snippet. 25 of 38 titles run past 60 characters and get cut off in results. The About page reuses the homepage's title and description word for word.

Fix: write descriptions for the posts, shorten titles, give About its own.

Images have no alt text

● Medium

About 94% of images across the site (235 of 251) have no alternative text. This hurts image search and screen-reader users.

Fix: add short, descriptive alt text to every meaningful image.

Google does not know you are a local business

● Medium

The structured data only says "Organization" with a name and logo. There is no LocalBusiness or ProfessionalService markup with your address, phone, hours, service area or social profiles. Five pages have FAQ sections that are not marked up, and blog posts list the author as "admin".

Fix: add LocalBusiness, FAQ and author (Ashley) markup. This also helps AI assistants cite you.

Freshness, tracking and trust signals

No analytics installed

⚠ High

We found no Google Analytics, Tag Manager or conversion tracking in the site code, only Cloudflare's basic visitor counter. That means there is no record of how many people fill in the contact form, start the Health Check or tap your phone number, or which pages bring them in.

Fix: set up Google Analytics 4 with conversion events, and confirm Google Search Console access.

No privacy policy

⚠ High

The site collects names, emails, phone numbers and file uploads, but there is no privacy policy page (the usual address returns "page not found"). Alberta's PIPA and federal PIPEDA expect one, it is a trust signal for an HR firm, and Google Ads requires it.

Fix: publish a privacy policy and link it in the footer and beside each form.

Blog has gone quiet

● Medium

All 24 posts are dated either August 23 or December 14, 2023. Nothing has been published since. Visitors and Google both read that as inactivity.

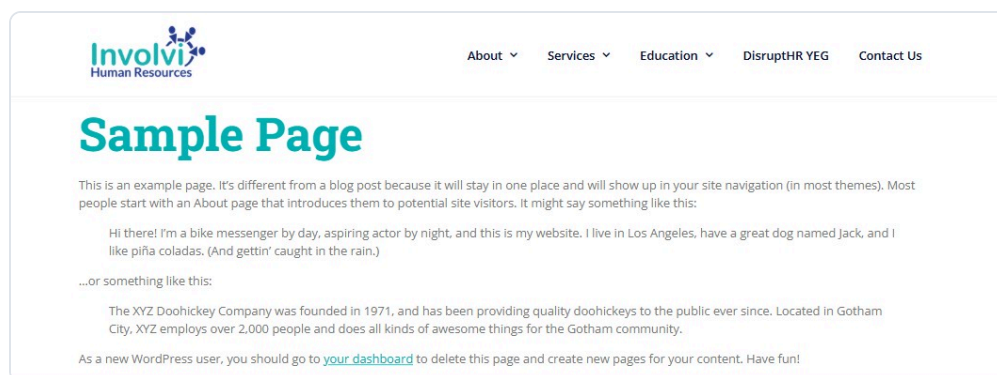

Fix: one or two short posts a month on Alberta employer questions, plus a refresh of the best 2023 posts.

Thin and missing pages

● Medium

The homepage lists Investigations and HR Metrics & Reporting as services, but neither has its own page, so you cannot rank for them. Recruitment Packages has a page but is missing from the Services menu. Author and "Uncategorized" archive pages are indexable and show the "admin" username.

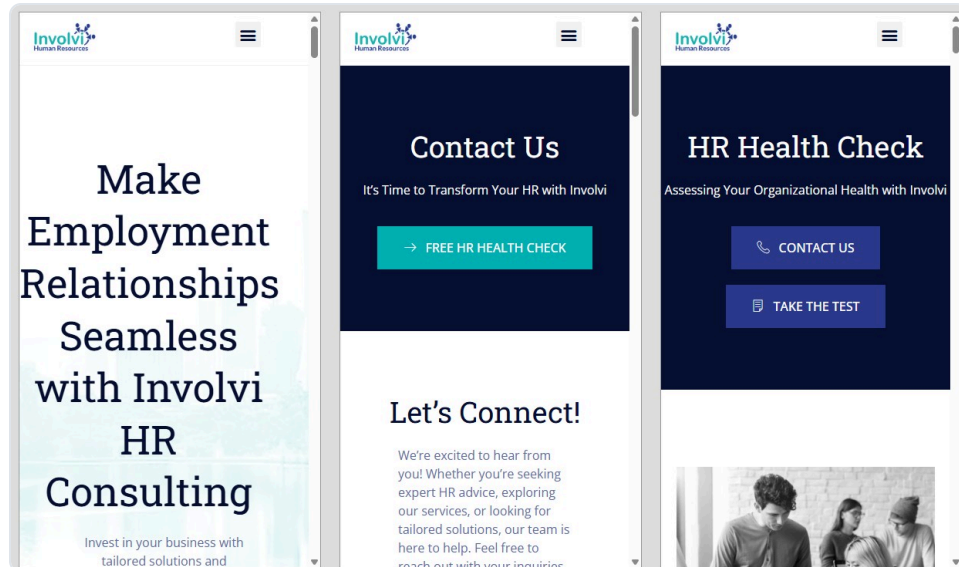

Fix: add the two service pages, fix the menu, hide the archive pages from search.

involvi.ca/sample-page/ is live and in the sitemap, so Google can index it.

Clear offer, generic message, leaky funnel

We reviewed the site on desktop and at phone width, following the path a business owner would take from the homepage to getting in touch.

Phone view: homepage, Contact Us and HR Health Check. On the homepage the headline fills the whole first screen and the first button sits below the fold.

The message is generic

● Medium

Lines such as "revolutionize your HR strategy", "Ignite Organizational Excellence" and "Unlock the full potential of your workforce" could belong to any firm. The site never says plainly who you help (for example, Alberta businesses with 5 to 100 employees and no HR department), what they get, how fast, or roughly what it costs.

Fix: lead with the client's problem and your specific answer; add outcomes, process and "starting at" pricing where possible.

The Health Check leaves the site

⚠ High

Your main lead offer sends visitors to one of four Microsoft Forms, picked by company size. They leave involvi.ca, see a different look, and there is no thank-you page or tracking to show how many start and finish.

Fix: one branded, on-site Health Check form with a company-size question, instant confirmation email and tracked completions.

Every button says "Contact Us"

● Medium

Nearly every section, including the video cards on Resources, ends with the same button. There is no "book a call" option, and the phone number is not tap-to-call on the homepage or in the header.

Fix: a header button to book a 15-minute call, tap-to-call phone everywhere, and next steps that match each section.

Friction, proof and polish

The image shows a contact form with the following elements:

- Email Address** and **Phone Number** input fields.
- Message** input area with a character count of 0 / 180.
- Upload file** section with a 'CHOOSE FILE' button and 'No file chosen' text.
- SEND MESSAGE** button.
- protected by reCAPTCHA** logo.
- Follow Us** section with social media icons (Facebook, Twitter, Instagram, LinkedIn).
- Phone Number** (780) 652-0928.
- Email** ashley@involvi.ca.
- Address** 2707 Ellwood Drive SW Edmonton AB T6X 0P7.

Contact form: the message box stops at 180 characters, and a file upload accepts almost any file type.

Contact form friction

⚠ High

Eight fields, a **180-character limit** on the message (about two sentences, for what are often complicated people issues), a file upload that accepts almost any file type, and labels that disappear once someone starts typing. A second, hidden form also sits on the page.

Fix: name, email, phone, message (no limit), optional company size. Remove or restrict uploads to PDF and Word.

Light social proof

● Medium

Three testimonials with first names only. No client logos, case studies, Google rating, CPHR or SHRM badges, or mention of the Edmonton Chamber of Commerce's 2025 feature on Involvi.

Fix: full-name testimonials with company, a Google reviews block, two or three short case studies and credential badges.

Content errors

● Medium

- Careers: "please to submit your resume" with no link or email to send it to.
- About: Ashley's bio says she "is a CPHR Candidate" while her title shows CPHR.
- The Twitter/X icon opens the X login page instead of your profile.
- On Resources, two video cards share the same title and description; "Leave us a review" links point to different places.

Navigation

Low

"About" and "Services" are placeholders that do nothing when clicked. "DisruptHR YEG" in the main menu takes visitors to another website. Menu labels differ between header and footer ("Additional HR Services" vs "Additional HR Solutions").

Accessibility

● Medium

Scores of 88 to 91. White text on the teal buttons is below the contrast minimum, the logo and social icons have no text labels for screen readers, the "skip to content" link does not work, and heading levels jump around.

Secure and current, with some tidying to do

involvi.ca moved to 40Two's managed hosting on September 9, 2026. It sits behind Cloudflare, with automatic SSL renewal.

CHECK	STATUS	NOTES
WordPress core	✓ Current	Version 7.1.2
Known vulnerabilities	✓ None	Security scan September 23, 2026. The Forminator form plugin was patched to 1.57.3 after a September advisory.
SSL certificate	✓ Valid	Auto-renewing for involvi.ca and www.involvi.ca
Page builder	✓ Current	Elementor and Elementor Pro 4.3.0, Hello Elementor theme
Unused software	● Tidy up	7 inactive plugins and 4 inactive themes; two remote-management plugins (WP Remote and ManageWP Worker) doing the same job; a backup plugin (WPvivid) that may duplicate hosting backups; Envato Elements (a design library) left active on the live site.
Add-on packs	● Review	ElementsKit and Essential Addons on top of Elementor Pro. Removing what is unused cuts page weight and the number of things to keep patched.

ACTION PLAN

Prioritized action items

Sorted by priority. Priority 1 items are low effort and remove risk or embarrassment; later phases build on the data they produce. Effort: S = hours, M = days.

#	ACTION	EFFORT	OWNER
Priority 1 Quick wins, weeks 1 to 2			
1	Install measurement: Google Analytics 4 and Tag Manager, tracking form submissions, Health Check starts, phone and email clicks; connect Google Search Console.	S	40Two; Involvi grants access
2	Publish a privacy policy and link it in the footer and beside every form.	S	Involvi approves; 40Two publishes
3	Remove test content from Google: Sample Page and Elementor #6; hide author and "Uncategorized" archives.	S	40Two
4	Fix the three lorem-ipsum blog addresses with permanent redirects.	S	40Two
5	Fix the contact form: remove the 180-character limit, restrict or drop file uploads, visible labels, remove the hidden duplicate form.	S	40Two
6	Correct content errors: Careers sentence and apply email, Ashley's credential line, Twitter/X link, duplicated Resources card text, review links.	S	40Two; Involvi confirms
7	Show headlines instantly: turn off fade-in animations on above-the-fold headings.	S	40Two
8	Tap-to-call phone and a "Book a call" button in the header of every page.	S	40Two; Involvi picks booking tool
Priority 2 Speed and SEO foundations, weeks 2 to 6			
9	Speed pass: defer and combine CSS/JS, load only the font weights used (hosted locally), remove unused add-on packs, WebP images at the right size, click-to-load YouTube and maps, spam filter only on form pages. Target mobile 80+.	M	40Two
10	Headings and descriptions: one H1 per page and post, meta descriptions for all 24 posts, shorter titles, unique About title.	M	40Two
11	Alt text on every meaningful image.	S	40Two
12	Structured data: LocalBusiness/ProfessionalService (address, phone, hours, service area, social profiles), FAQ markup on 5 pages, Ashley as post author.	S	40Two

#	ACTION	EFFORT	OWNER
13	Bring the HR Health Check on-site: one branded form, company-size question, thank-you page, instant confirmation email, tracked completions.	M	40Two; Involvi supplies questions
14	Accessibility fixes: button contrast, labelled icons, working skip link, heading order.	S	40Two
Priority 3 Refresh for conversion, weeks 6 to 12			
15	Rewrite homepage and service copy: who you help, outcomes, process, response times, "starting at" pricing.	M	Involvi and 40Two
16	Add proof: full-name testimonials, Google reviews, client logos (with permission), 2 to 3 case studies, CPHR/SHRM badges, Chamber feature.	M	Involvi supplies; 40Two builds
17	Service pages for Investigations and HR Metrics & Reporting; Recruitment Packages in the menu; simpler navigation.	M	Involvi and 40Two
18	Map on Contact only; replace the repeated "Where to find us" block with a call to action.	S	40Two
Priority 4 Grow and maintain, ongoing			
19	Restart Insights: 1 to 2 posts a month on Alberta employer questions in a question-and-answer format; refresh the best 2023 posts.	Ongoing	Involvi and 40Two
20	Local SEO: Google Business Profile tune-up and a routine for asking happy clients for reviews.	Ongoing	Involvi and 40Two
21	Housekeeping: remove inactive plugins and themes, keep one management plugin and one backup method, remove Envato Elements.	S	40Two
22	Monthly check-in: speed, SEO, security and leads scorecard with a 30-minute review.	Ongoing	40Two

Before we plan the refresh

Your answers decide whether the refresh should focus on credibility, lead generation, or both, and what we measure each month.

WHY A REFRESH, AND WHAT IT SHOULD ACHIEVE

- 1 What is prompting a refresh now? What frustrates you most about the current site?
- 2 What should the website do for Involvi over the next 12 months? If it worked perfectly, what would be different in your business?
- 3 Is the site mainly a credibility check for people who were referred to you, or should it bring in new clients from Google on its own? When we last looked at the site, lead generation was the priority. Is that still true?

LEADS TODAY

- 4 Roughly how many inquiries come from the website each month, and through which door: contact form, HR Health Check, phone or email? How many become clients?
- 5 What happens after someone completes the HR Health Check? Who follows up, and how quickly?
- 6 Which services do you most want to grow, and are any being retired? Investigations and HR Metrics are mentioned on the homepage but have no page.

AUDIENCE AND MESSAGE

- 7 Who is your ideal client: industry, number of employees, location? Alberta only, or further afield?
- 8 In your own words, what makes Involvi different from other Edmonton HR firms?
- 9 Would you be comfortable showing "starting at" prices or package ranges?

CONTENT AND BRAND

- 10 Are you happy with the logo, colours and photography? Any new photos or video planned?
- 11 Who will write and approve copy? Would you like us to draft it for your review?
- 12 Can we use client names, logos, testimonials or short case studies (with their permission)?
- 13 Can someone at Involvi commit to one or two posts or short videos a month?

ACCESS, TOOLS AND TIMING

- 14 Who has access to Google Analytics, Search Console and your Google Business Profile today? We found no analytics on the site.
- 15 Which tools should the site connect to: a booking tool (Microsoft Bookings or Calendly), a CRM, a newsletter, Microsoft Forms?
- 16 What budget range and timeline do you have in mind, and is there a deadline or launch moment to aim for?
- 17 Are there websites, competitors or not, whose look or experience you like?

NEXT STEPS

How we would work together

STEP 1

Discovery call

30 minutes to walk through this report and your answers to the questions.

STEP 2

Quick wins

Priority 1 items completed within two weeks of your go-ahead.

STEP 3

Monthly check-in

A scorecard on the first Wednesday of each month, reviewed together in a 30-minute call.

What the monthly scorecard tracks

- **Speed:** mobile and desktop scores and load times for the homepage, HR Health Check and Contact pages.
- **Search:** pages indexed, headings, descriptions and alt text coverage, new issues found.
- **Leads:** contact form submissions, Health Check completions, phone and email clicks (once analytics is live).
- **Security:** updates applied, vulnerabilities, backups and uptime.
- **Action plan:** what is done, in progress, and next.

How this review was done

Speed: Google PageSpeed Insights (Lighthouse) on the homepage, HR Health Check and Contact Us pages, mobile and desktop, September 24, 2026. Search: a crawl of all 38 pages and posts in the XML sitemap, checking titles, descriptions, headings, image alt text, indexing rules and structured data. Experience: manual review at desktop and phone widths, including forms, navigation and calls to action. Security: 40Two's hosting vulnerability scan of September 23, 2026. Lab scores vary by a few points between runs; the monthly scorecard tracks the trend.
